

# If you are a household contact

People who live with someone with COVID need to quarantine.

You need to get a PCR test and quarantine:  
Vaccinated - 7 days  
Unvaccinated - 14 days

If all adults in household are vaccinated, their children under 12 only need to quarantine for 7 days.

If any household contacts test positive they must isolate for 10 days from their positive test result.

'Household' includes household-like settings such as aged care facilities and boarding houses.
